# Aims and scope

Primate Biology (PB) is an international peer-reviewed open-access journal that publishes advanced research in all scientific areas involving non-human primates.

The journal publishes research articles, reviews, brief communications, technical notes, registered reports, opinion papers, and book reviews. As an additional option, articles published previously in PB may be commented on.

Papers can address different topics and approaches, including theory, modelling, experiments, and methods. PB covers the following subject areas, which are used to categorize papers:

- anatomy and embryology;
- animal welfare and husbandry;
- behaviour;
- cognition and communication;
- conservation;
- ecology and biogeography;
- evolution, phylogeny, and palaeontology;
- genetics;
- immunology;
- infection biology;
- neurosciences;
- pathology;
- physiology;
- reproductive biology;
- stem cell biology.
